

The Future of On-Chain Credit

Unified UX. Unified Liquidity. Unified DeFi.

Introducing Agra - Decentralized Prime Brokerage And Settlement Layer

Unified Trading Interface

One interface for execution, routing, and programmable settlement across DeFi.

All-In-One Liquidity

All-in-one platform aggregating liquidity for swaps, lending/borrowing, perpetuals and options.

Settlement Infra

Generalized intent settlement infrastructure to enable the next generation of dApps.

Integrated Fulfillment Venue

A flexible venue for market makers and protocols to integrate and offer fulfilment

Cross-Margin by Default

Cross-margin across chains and protocols. Capital-efficient trading by default.

Solving Risk And Margin Constraints In DeFi Infrastructure

- problem

Centralized Risk Management

- LP's need to trust one team to manage risk
- Sophisticated LP's cannot manage risk themselves
- Single point of failure

- problem

Leverage and Margin in Walled Gardens

- Using exotic positions as collateral
- Leverage stops at the protocol level
- Perp positions can only be opened with limited spot margin offerings

+ solution

Agra - An Intent Based Prime Brokerage

- + Outsourced approach to risk management, leveraging intents
- + Universal liquidity infrastructure to support protocols and market makers as venues
- + Support exotic collateral types for margin and use in any protocol

We Have Built

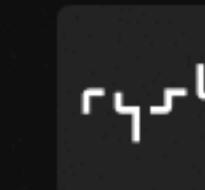

Umami Finance

Umami provides single-sided yield generated by an advanced delta one LP strategy.

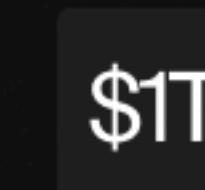

Producing the highest
BTC denominated
yield on-chain.

Rysk Finance

Umami provides single-sided yield generated by an advanced delta one LP strategy.

Trading Algorithms

Trading algorithms developed by team members have executed over \$1 trillion in notional trading volume for clients across various exchanges, including Deribit, Bybit, Binance and OKX.

The Agra Terminal

Trading Aggregator

Trade spot, margin, perps and options. All within one credit account via a unified on-chain terminal.

Intent-Based

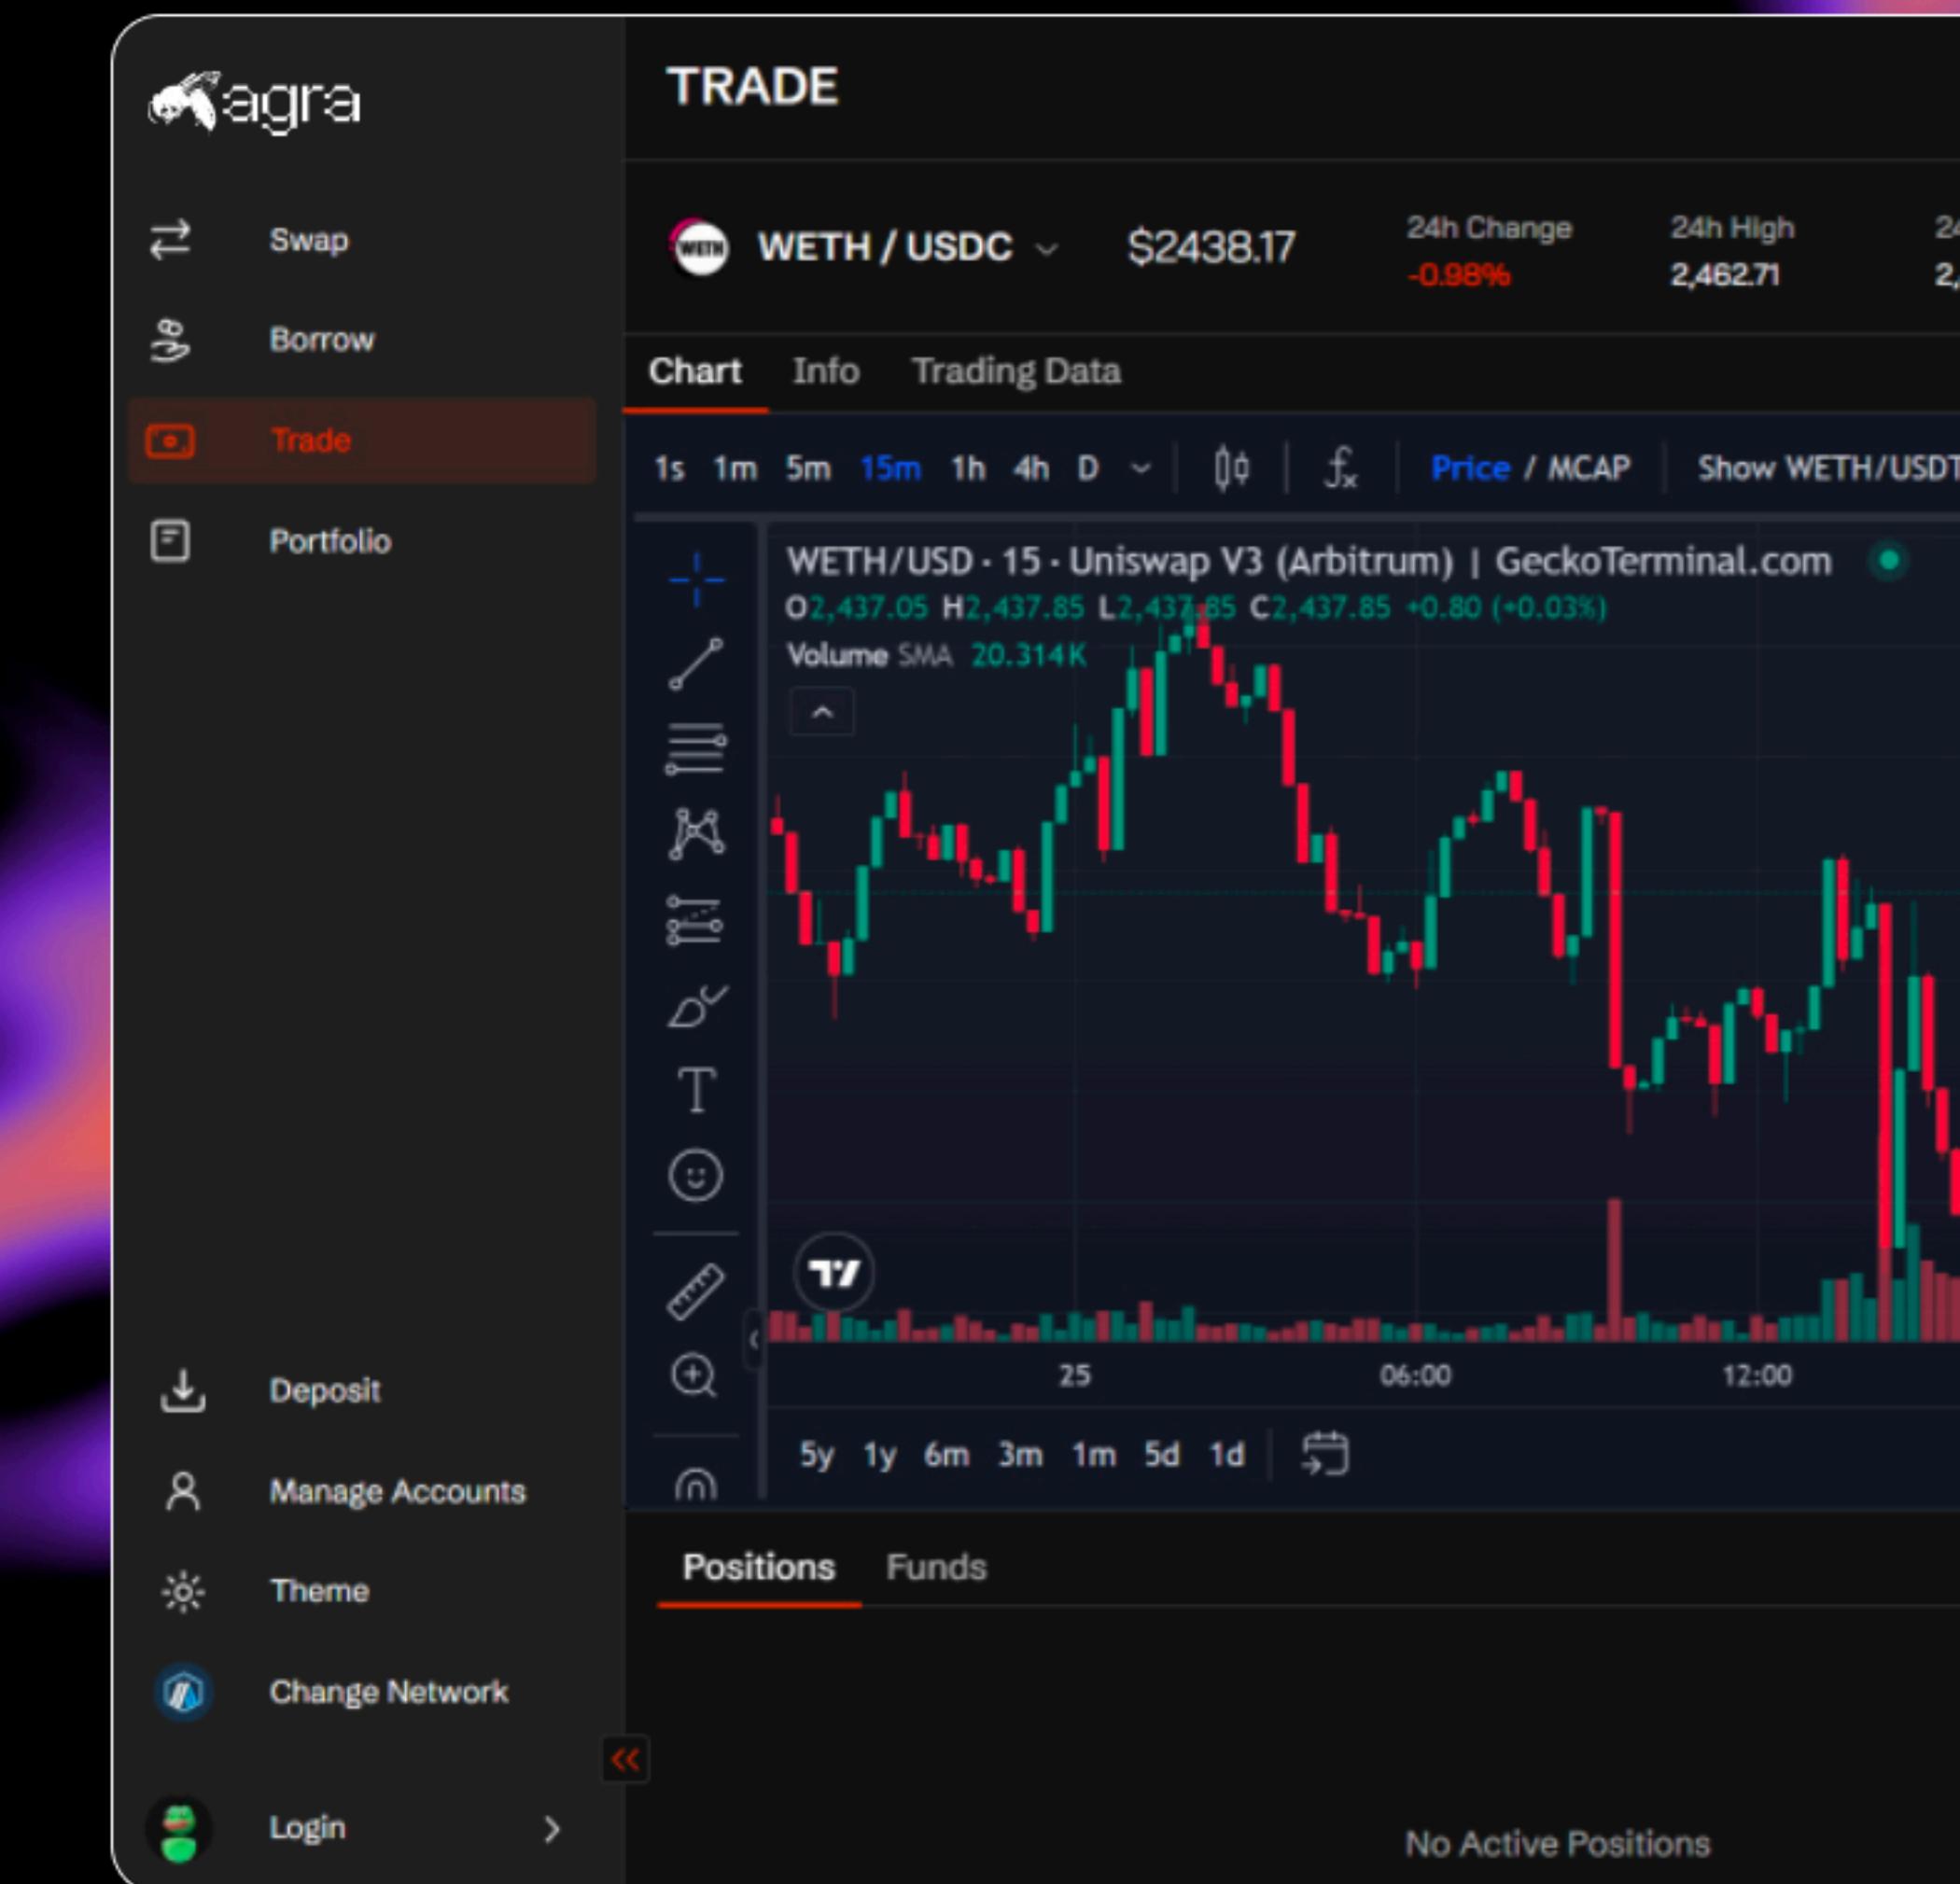

Manage and optimize your positions through secure intent-based tools, enabling efficient portfolio control and automation.

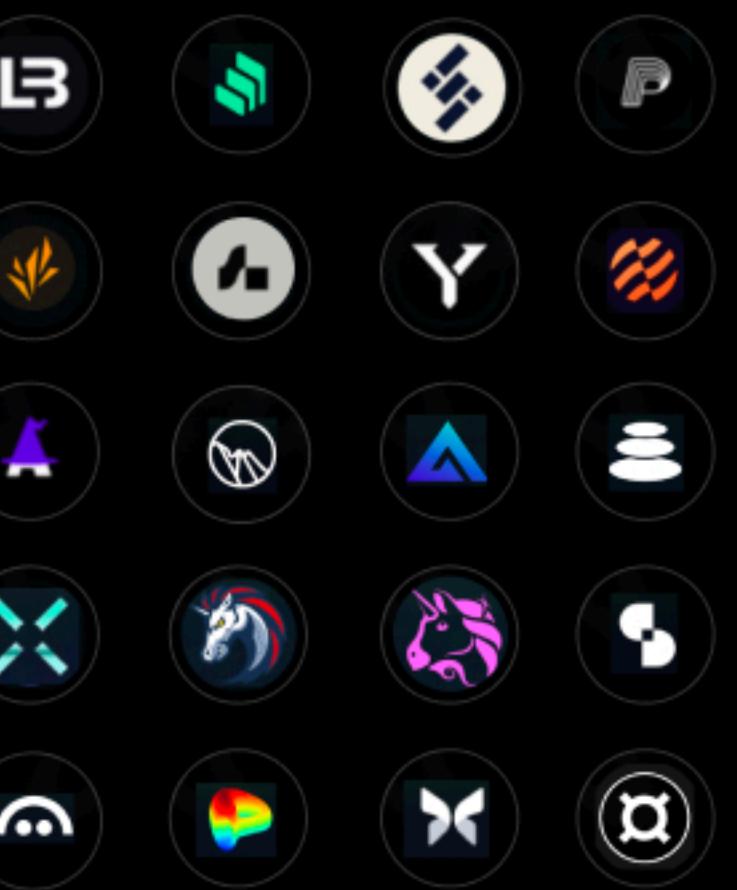

Account Abstraction

Enhancing user security and control with account abstraction. Managing complex strategies and minimizing risk without relying on centralized logic.

Cross-protocol Margin & Positions

Access cross-protocol margin and use exotic collateral to trade perps, leverage across venues, and execute basis strategies.

agra

Powered By A General Purpose Settlement Layer

Settlement Layer

A programmable infrastructure that outsources execution to off-chain solver networks for scalability and flexibility.

+

Universal Credit Access

Access credit against any position. Unlock capital efficiency without protocol limitations.

+

Venue Auctions

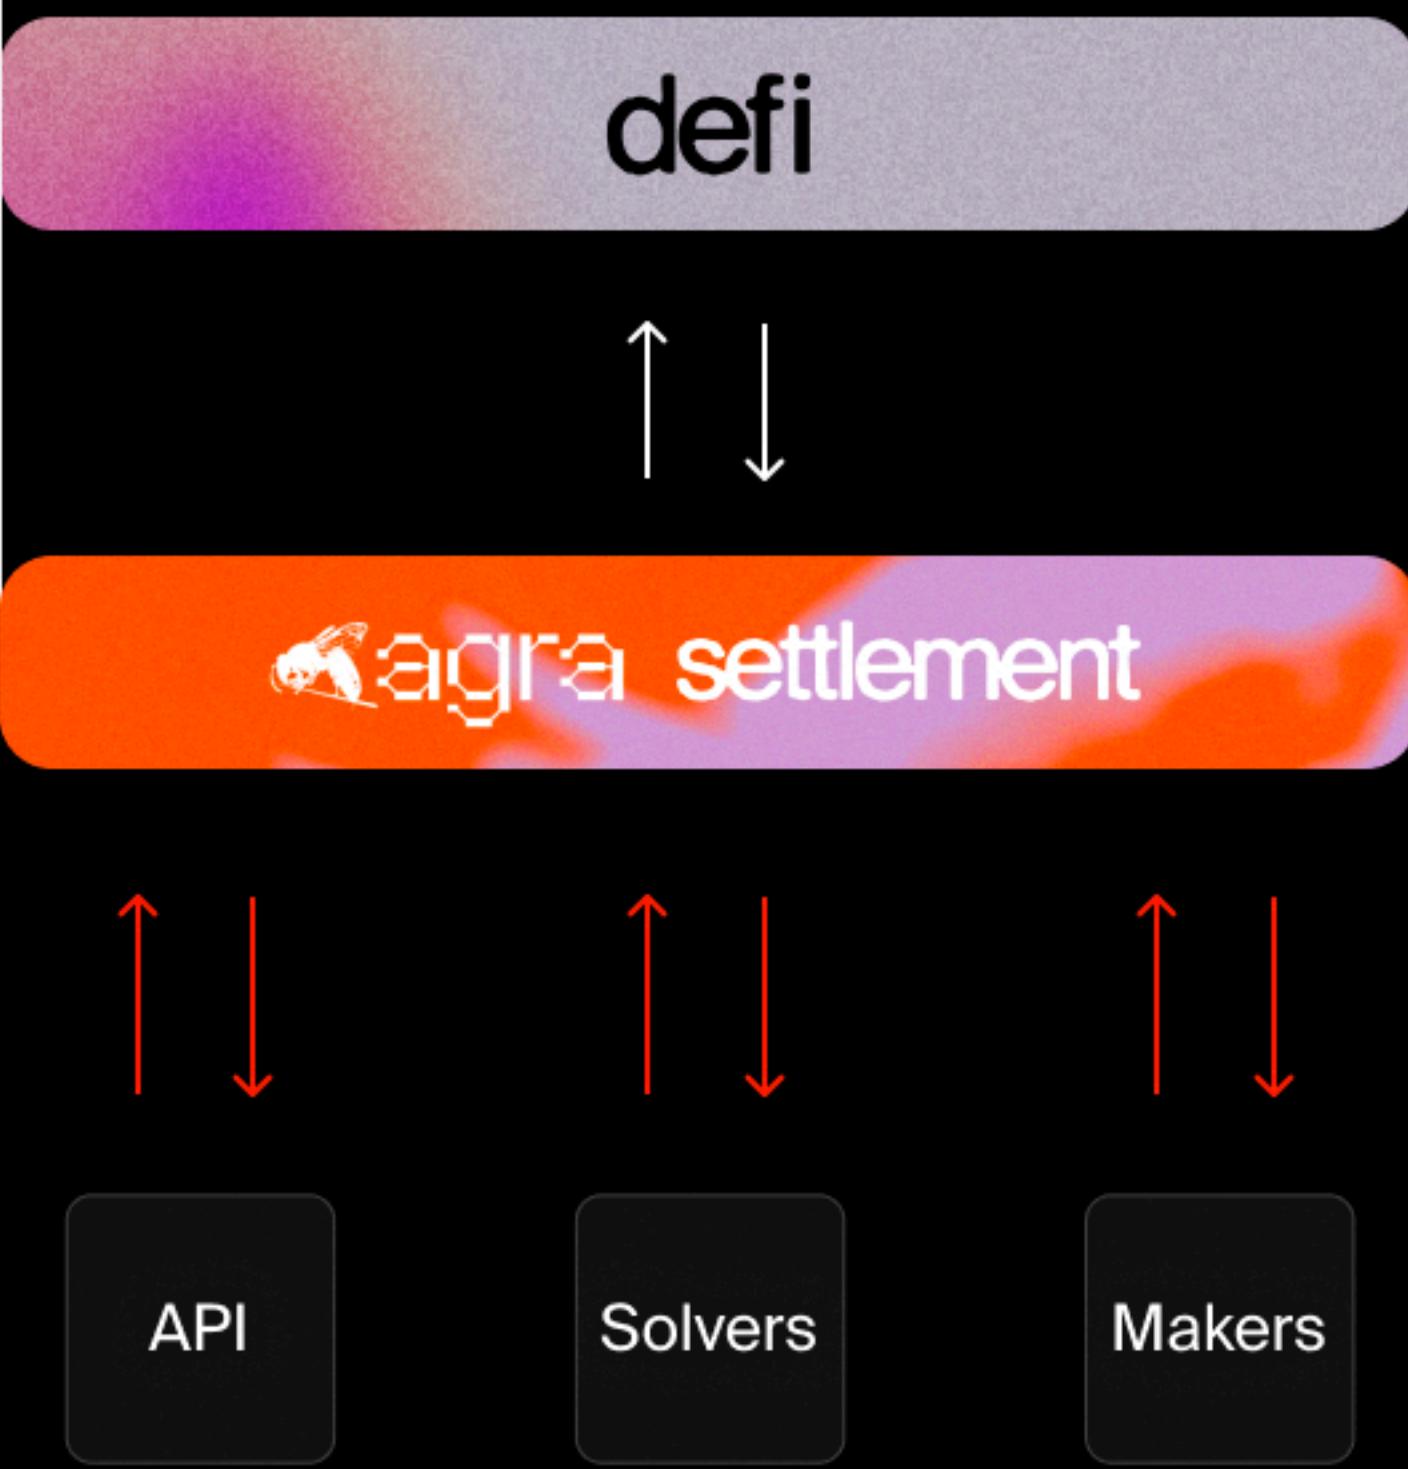

Venue specific auctions and settlement terms result in better execution and pricing for users.

+

Composable Liquidity

Turn idle capital into swap, leverage, or margin rails – all through modular, bilateral settlement logic.

+

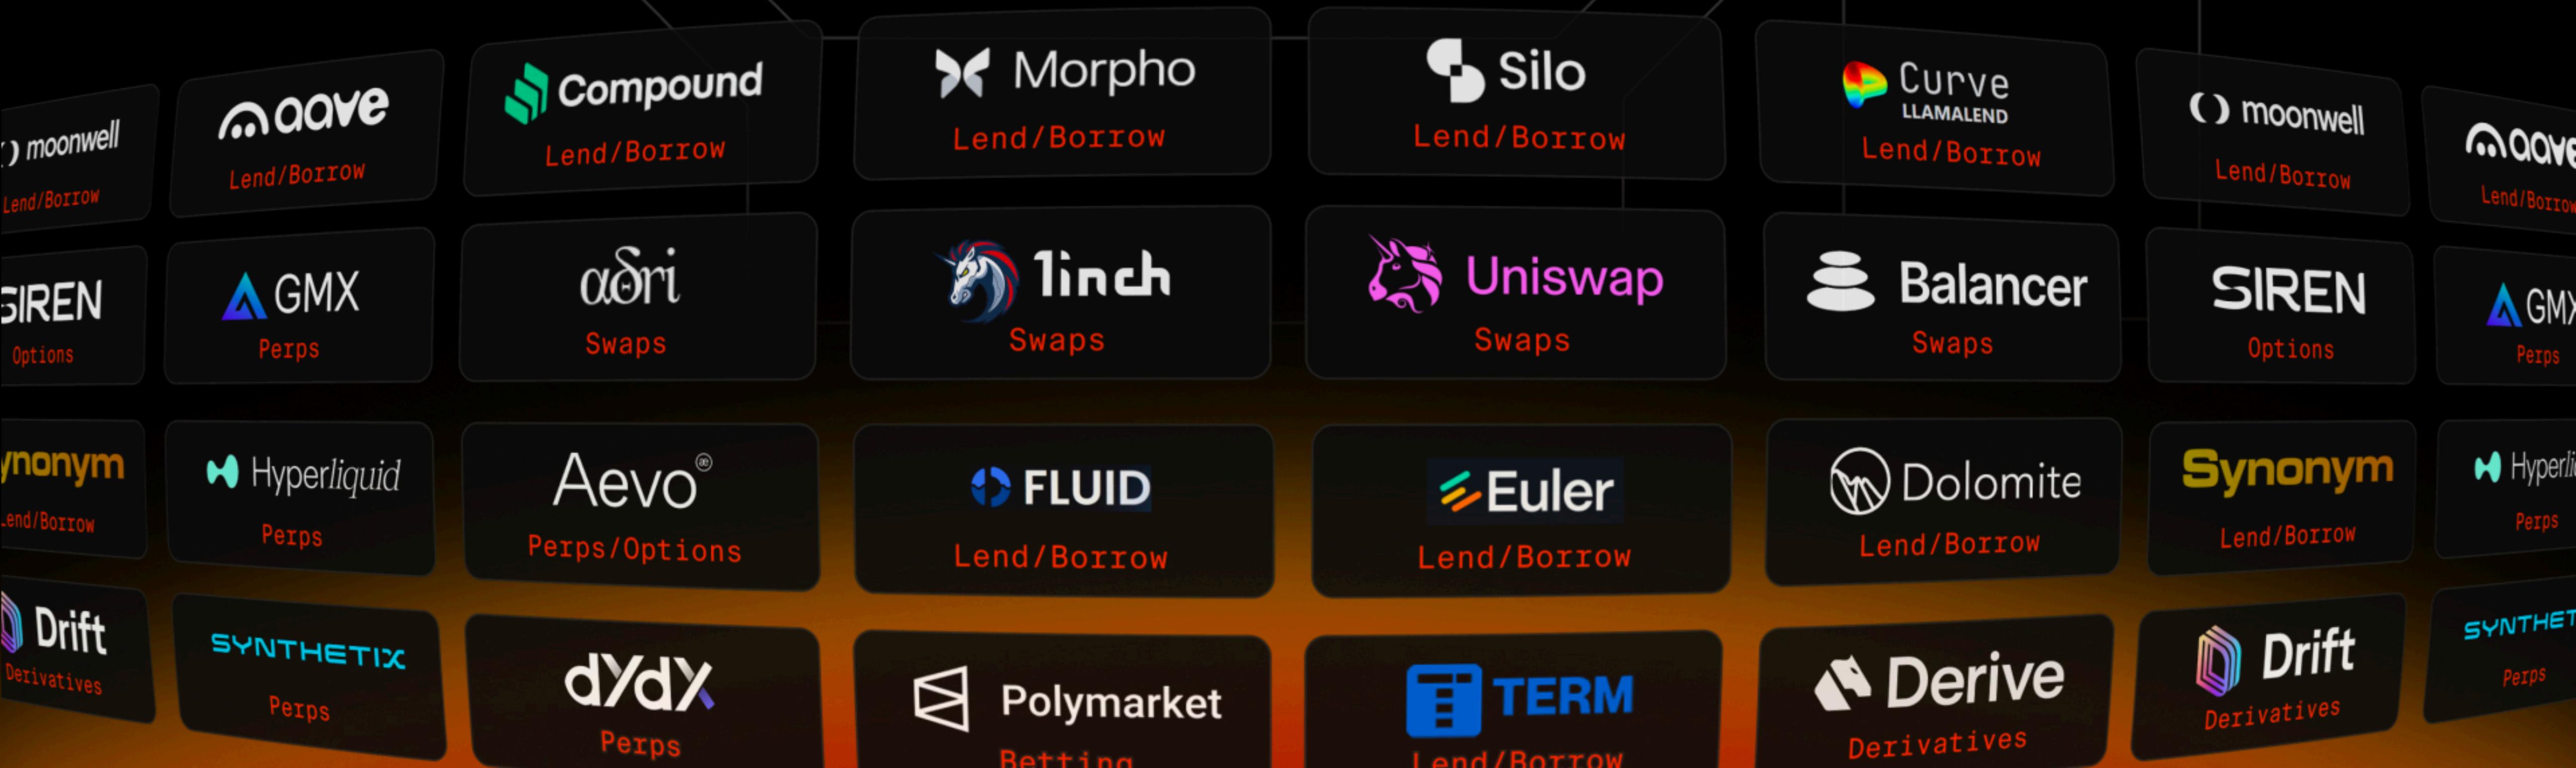

Prime Brokerage Access To All Of DeFi In One Terminal

A unification layer pairing users with top protocols and market makers, providing access to the best opportunities across multiple chains, all within a single interface.

This Hub and Spoke model allows for accounts to be extended endlessly.

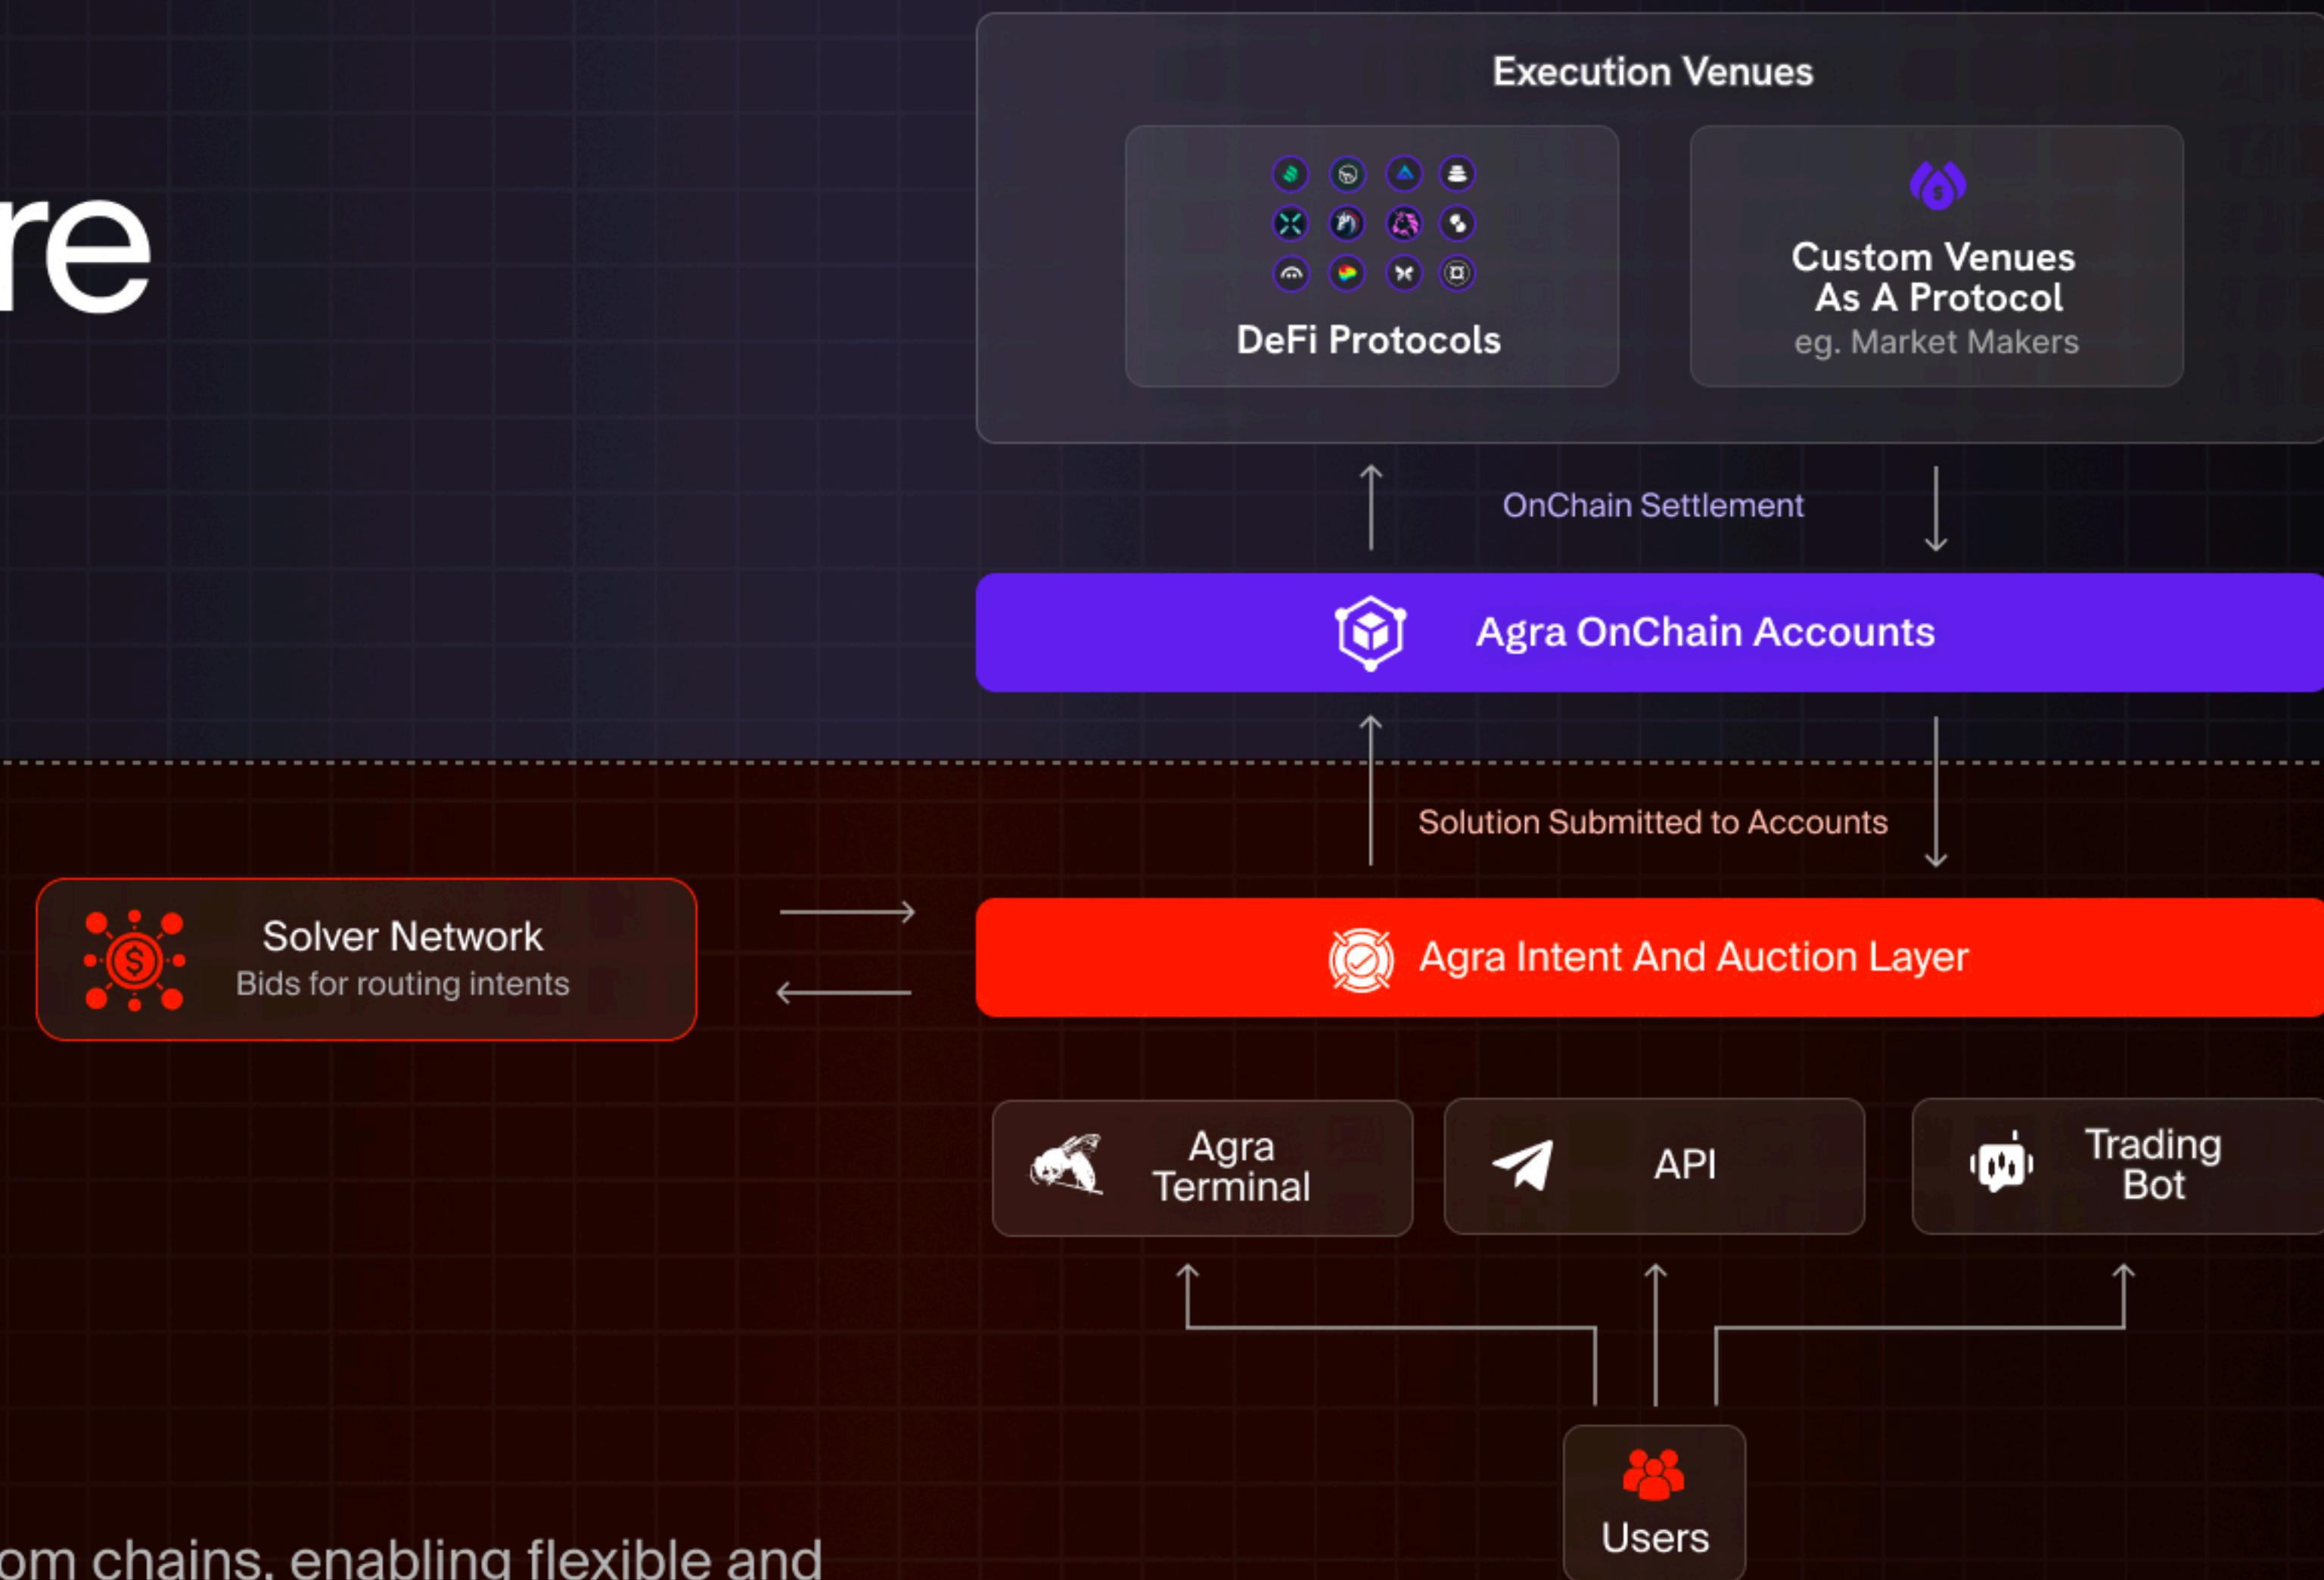

Advanced Architecture

On-Chain

Off-Chain

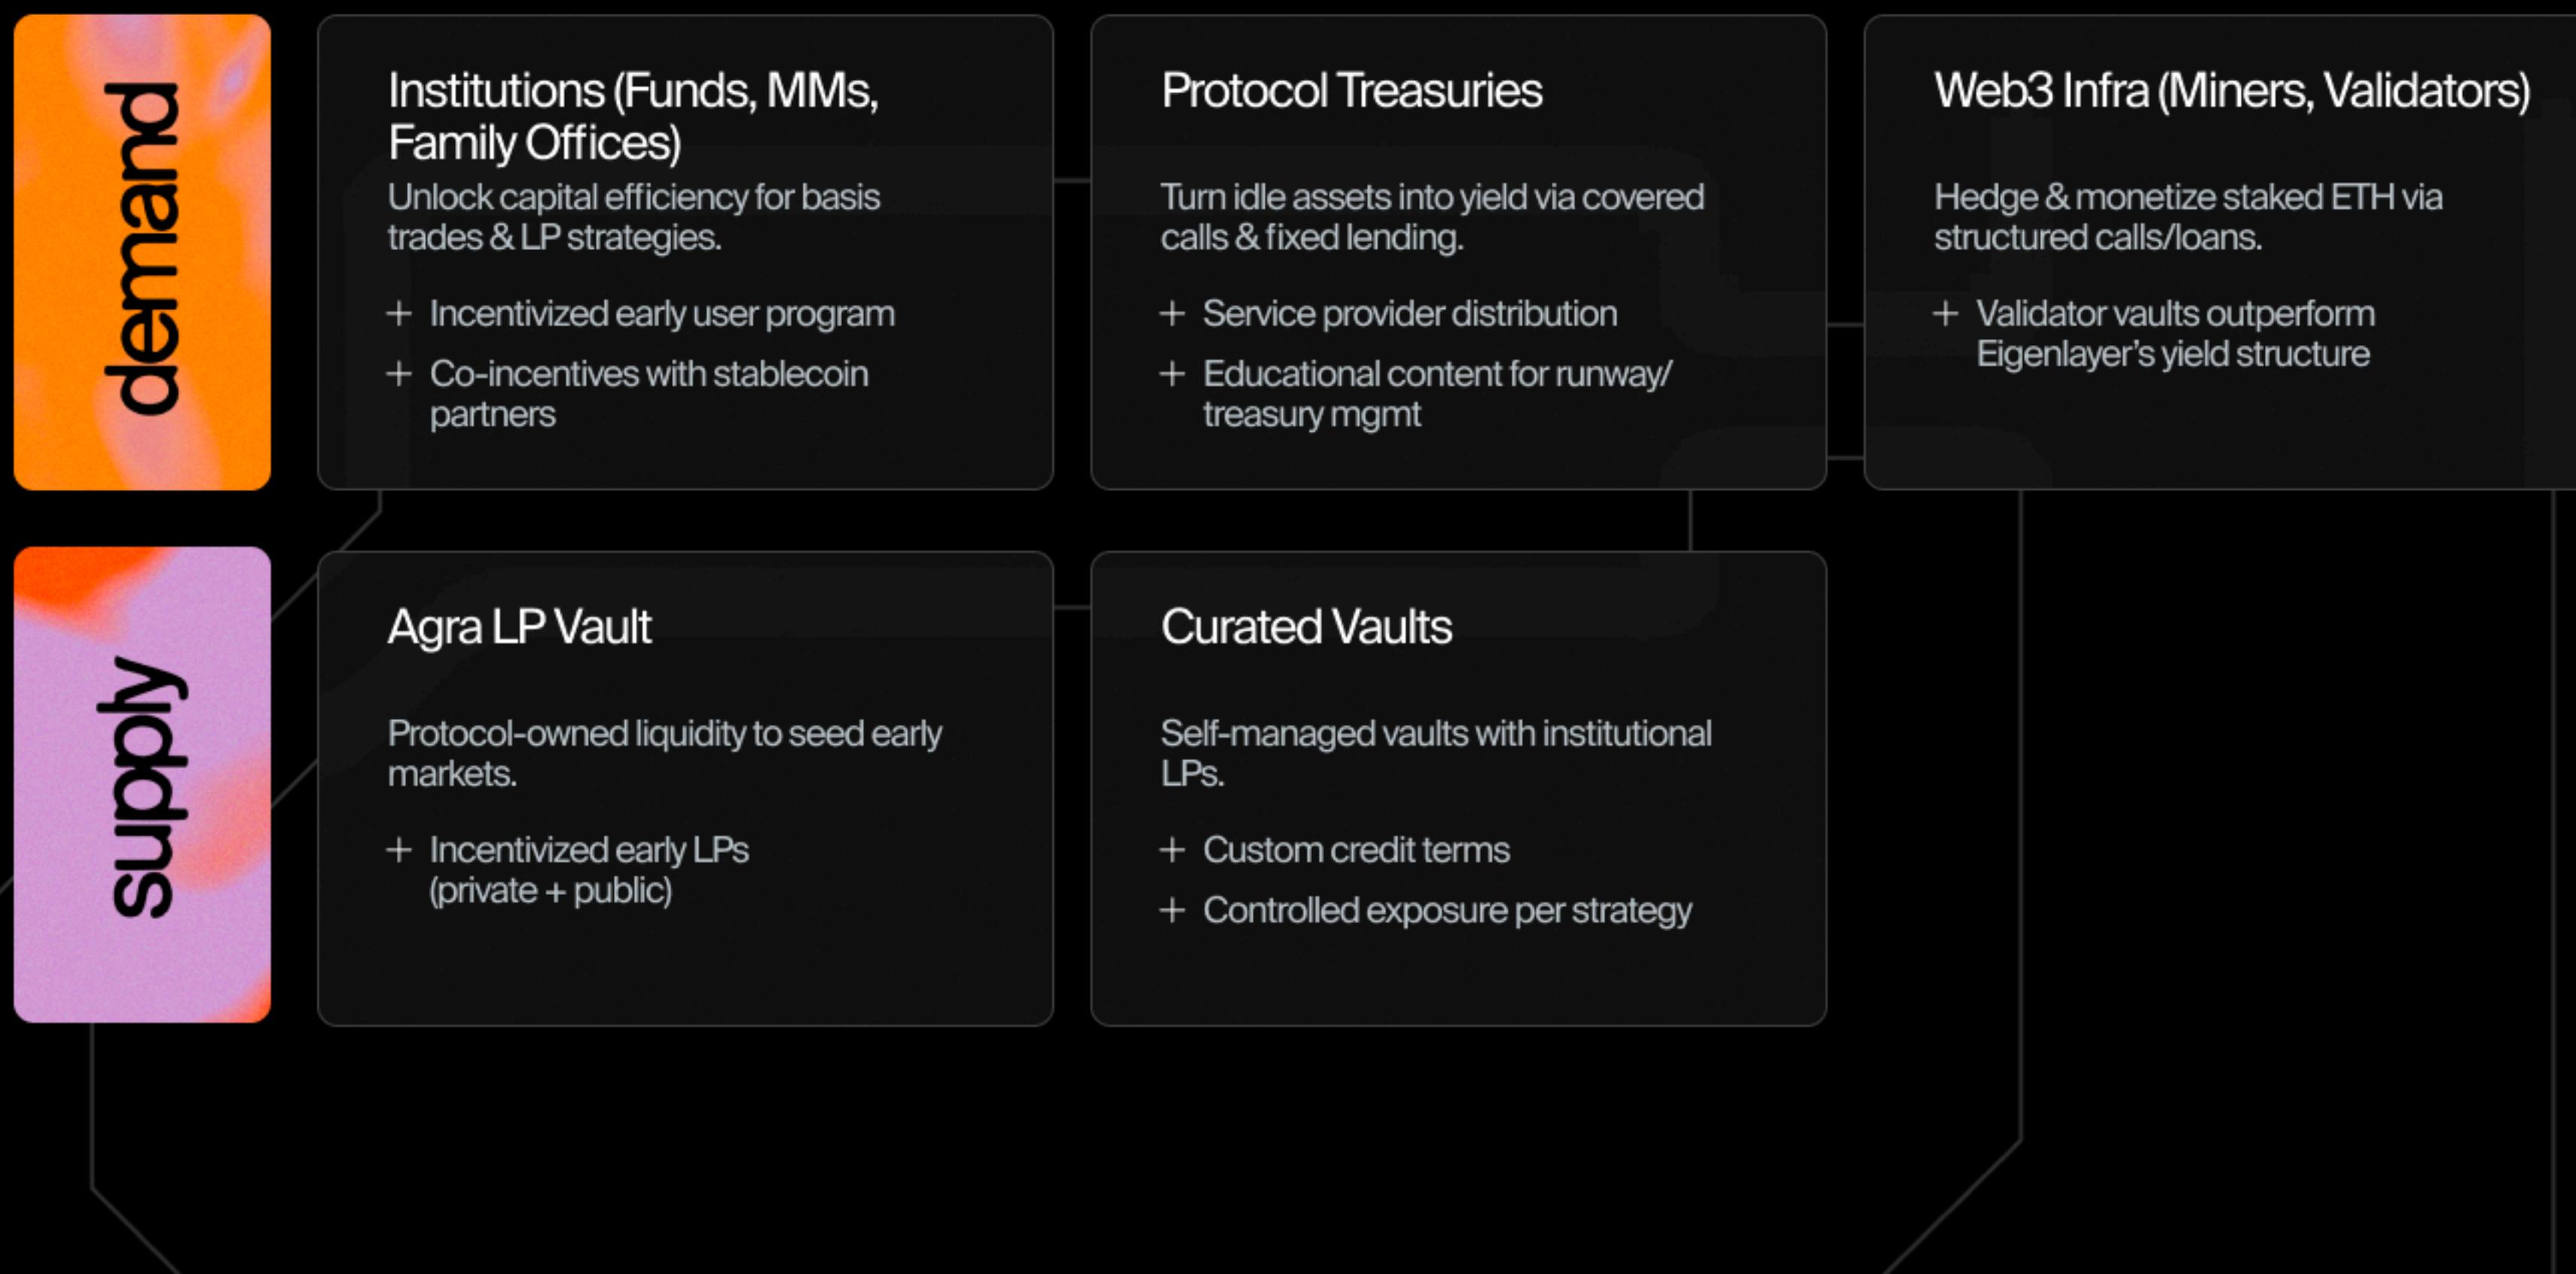

Agra decouples execution logic from chains, enabling flexible and capital-efficient fulfillment across DeFi protocols.

GTM Strategy

Bootstrap supply and demand side simultaneously rewarding usage of Agra
to run leverage basis trades and using exotic collateral types

Multiple Sustainable Sources Of Revenue

Our balanced approach promotes sustainable growth, enhances user experience, and supports long-term success by aligning incentives across participants.

revenue

1

+

Cross Margin

Users and lenders engage in short-term cross margin agreements, creating a differentiated revenue stream for the protocol.

2

+

In-House Venue

Launching in-house venues allows us to compete with other protocols, enhancing fulfilment options and driving additional revenue.

3

+

Solver Revenue

Generating fees at the point of order execution.

4

+

Rate Spread

Introducing borrow rate spreads to aggregated positions, ensuring they remain the most attractive option for users.

Roadmap

Packed with features that will make it the ultimate trading terminal for DeFi.
Each new tool and integration will redefine how users engage with DeFi protocols.

Q4 2025+

Future Developments

- + Protocol Support
Aave, Compound, Curve, Llamalend, Morpho Blue, Silo, Dolomite, Uniswap, Paraswap
- + Account System
Intents, gas sponsorship, one-click, roles-based access
- + Leverage Management
Position migration, refinancing
- + Aggregated Borrowing and Margin
Optimizing collateral by splitting it across multiple platforms

- + Perpetual Trading Integration
GMX, Synthetix, Vertex, Perennial
- + UX Features
API controlled accounts, Passkey integration, PWA
- + Cross Margin
Enabling positions as collateral

- + App Chain Integrations
Hyperliquid, Aevo, Derive, Lighter
- + RFQ Credit
Credit lines in Agra accounts for any token
- + ALP Vault
In-House vault for lending against user accounts
- + Onboard Market Makers and Liquid Funds
OTC venues and strategies

- + Trading Platform Integrations
- + Decentralization of Agra Settlement
- + Generalized Intents
- + Options Support
- + In-House Bilateral Venues
Lend, Perpetuals, Options
